

You always solve
anything...

Now we've got a
solution for you.

HONOADOOR & cloudAssistant
The solution to manage garage doors

Universal, 100% compatible with all installed devices

It can be assembled in any completed or yet-to-be completed installation, no need to replace devices or reprogramme them. **Fast assembly** and **compatible with current fobs**.

Earn money and earn customer loyalty

You will save money and time by avoiding to go on site, it will help you to immediately solve problems, and you can give a rapid response to your Community Managers.

Real time management and control

Have control and security for the installation: only the installation manager can see information and modify parameters of the installed devices, avoiding going on site and on real time

Verify door status and operation: remotely activate devices and check that everything is working correctly Avoid unnecessary travel

Schedule upcoming maintenance based on convenience: get statistics and information on how the installations are used

Avoid unnecessary wear on the door and motor installation: leave the door open during rush hour to avoid overuse of the operator and door components, by activating the schedule timer

Manage installer groups: registering or unregistering universal fobs for installers and modifying staff or worker routes won't be a concern

Identify and manage cloned fobs: detect and manage fobs with suspicious counters that create miscontrol of the installation and interfere on other fobs malfunction

Manage access: register or unregister users and schedule authorisations by hours, weekends, holidays....

Save time and resources with online management and task automation: you can provide a rapid remote response and avoid calls

We simplify your tasks

Delegate control management to the Community Manager: you can transfer the management of the installation to Community Managers who wish to provide a closer and personalised service to communities they are responsible of

Create bridges with the user: the QR code the device is provided with, can be read by the user to obtain contact information of the installation manager to obtain new fobs or services
